Please conduct a search of commercial, pending and allowed databases for :

oligos corresponding to positions 739-1932, 8646 to 9911, 9901-10953, and 11821-12945 of SEQ ID NO. 1

oligos corresponding to positions 79-861, 2011-2757, 5365-6471, 13156-13821, 2744-3109, and 858-2042 of SEQ ID NO: 2

oligos corresponding to positions 2352-3314, 3361-3875, 3977 to 5020, 6313-7323, 7310-8467, 1019-2359, 5114-6313 of SEQ ID NO: 3,

oligos corresponding to positions 12762-14054 and 14059-15060 of SEQ ID NO: 4.

Many thanks for your efforts!

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

AF285969
LOCUS       AF285969               13650 bp    DNA     linear   BCT 02-AUG-2001
DEFINITION  Salmonella enterica O antigen gene cluster, complete sequence.
ACCESSION   AF285969
VERSION     AF285969.1  GI:15076983
KEYWORDS    .
SOURCE      Salmonella enterica
  ORGANISM  Salmonella enterica
            Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales;
            Enterobacteriaceae; Salmonella.
REFERENCE   1  (bases 1 to 13650)
  AUTHORS   Wang,L. and Reeves,P.R.
  TITLE     The E. coli O111 and S. enterica O35 gene clusters: Gene clusters
            encoding the same colitose containing O antigen are highly
            conserved
  JOURNAL   Unpublished
REFERENCE   2  (bases 1 to 13650)
  AUTHORS   Wang,L. and Reeves,P.R.
  TITLE     Direct Submission
  JOURNAL   Submitted (09-JUL-2000) Department of Microbiology, The University
            of Sydney, Sydney, NSW 2006, Australia

RESULT 8
AY532664
LOCUS AY532664 12033 bp DNA linear BCT 30-MAR-2004
DEFINITION Escherichia coli serotype O103 O-antigen gene cluster, complete sequence.
ACCESSION AY532664
VERSION AY532664.1 GI:45644916
KEYWORDS .
SOURCE Escherichia coli
ORGANISM Escherichia coli
Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales; Enterobacteriaceae; Escherichia.
REFERENCE 1 (bases 1 to 12033)
AUTHORS Fratamico,P.M., Briggs,C.E., Debroy,C., Strobaugh,T.P. Jr. and Chen,C.-Y.
TITLE DNA Sequence of the Escherichia coli O103 O Antigen Gene Cluster and Detection of Enterohemorrhagic E. coli O103 by PCR Amplification of the wzx and wzy Genes
JOURNAL Unpublished
REFERENCE 2 (bases 1 to 12033)
AUTHORS Fratamico,P.M., Briggs,C.E., Debroy,C., Strobaugh,T.P. Jr. and Chen,C.-Y.
TITLE Direct Submission
JOURNAL Submitted (23-JAN-2004) Eastern Regional Research Center, Agriculture Research Service, U. S. Department of Agriculture, 600 E. Mermaid Ln., Wyndmoor, PA 19038, USA

XX
PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 6; Fig 7; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Escherichia coli O111 O antigen. The gene cluster was
CC   isolated from a cosmid gene bank of E. coli M92 chromosomal DNA by
CC   screening with E. coli O111 antiserum. Open reading frames within the
CC   gene cluster were identified on the basis of homology to known sequences.
CC   The genes encode proteins (see AAW88300-11) involved the synthesis of
CC   sugars present in the polysaccharide antigen, and in the transport or
CC   processing of polysaccharide or oligosaccharide units. The use of nucleic
CC   acid molecules derived from particular assembly and transport genes,
CC   particularly wbd (transferase), wzx (flippase) and wzy (polymerase)
CC   genes, within O antigen gene clusters improves the specificity of methods
CC   for the detection and identification of O antigens, e.g. in testing food-
CC   or faecal-derived samples, or samples from patients. The O antigen is a
CC   major virulence factor of enteropathogenic E. coli strains that cause
CC   diarrhoea and haemorrhagic colitis

PT   Novel nucleic acid molecule useful for the detection of flagellated
PT   bacterial strains in food, feces, etc.
XX
PS   Claim 3; Page 216-221; 245pp; English.
XX
CC   AAZ56331 to AAZ56398 represent nucleic acid molecules (I) encoding all or
CC   part of an Escherichia coli flagellin protein except a protein expressed
CC   by E. coli H1, H7, H12 or H48 type strains. The present invention also
CC   describes a method of detecting the presence of E. coli of a particular H
CC   serotype in a sample, comprising specifically hybridising a nucleic acid,
CC   preferably at least a pair, derived from a flagellating gene, specific
CC   for a particular flagellin gene associated with the H serotype, to any
CC   E.coli in the sample which contain the gene, and detecting any hybridised
CC   molecules, identifying the presence of that serotype in the sample. (I)
CC   are useful for: (1) detecting the presence of E. coli of H serotype in a
CC   sample by hybridising at least one or a pair of (I) to any E. coli in the
CC   sample and detecting the hybridised nucleic acid molecules; and (2) for
CC   detecting the presence of both O and H-serotypes of E. coli by
CC   hybridising at least one or a pair of (I) to any E. coli present in the
CC   sample and detecting the hybridised nucleic acid molecules. (I) is
CC   particularly useful for detecting the combination of O and H antigen.
CC   Hybridised (I) when using at least one (I) is detected by southern blot
CC   analysis and, when using a pair of (I), is detected by polymerase chain
CC   reaction (PCR). AAZ56399 to AAZ56420 represent primers used in the
CC   exemplification of the present invention

XX
PS Claim 7; Page 532-547; 1760pp; English.
XX
CC The present invention describes methods of obtaining immunogenic proteins
CC from Neisseria genomic sequences. AAA81453 to AAA82414 represent
CC specifically claimed Neisseria meningitidis genomic DNA sequences;
CC AAA81260 to AAA81303 and AAB25620 to AAB25663 represent Neisseria DNA
CC sequences and their corresponding proteins; AAA81254 to AAA81259 and
CC AAA81304 to AAA81321 represent PCR primers used in the isolation of
CC Neisseria meningitidis DNA sequences; and AAA81322 to AAA81452 represent
CC Neisseria meningitidis MenB polynucleotide ORF sequences, which are all
CC used in the exemplification of the present invention. The nucleic acid
CC sequences, protein sequences, and antibodies against them, can be used in
CC the manufacture of a composition. The composition can be used as a
CC medicament (or in the manufacture of a medicament) for treating,
CC preventing or diagnosing infection due to Neisserial bacteria. For
CC example, some of the identified proteins could be components of vaccines
CC against Meningococcus B; against all serotypes; and/or against all
CC pathogenic Neissariae. Identification of sequences from the bacterium
CC will also facilitate production of biological probes, particularly
CC organism-specific probes. Attempts to make efficacious Meningococcus B
CC vaccines have failed mainly due to antigen tolerance. Multivalent
CC vaccines have also been tried but none have successfully overcome
CC antigenic variability. The provision of further, complete sequences may
CC provide an opportunity to identify secreted or surface exposed proteins
CC that may be presumed targets for the immune system and which are not
CC antigenically variable or at least more conserved than other more
CC variable regions

PT   Neisseria meningitidis B full length genome sequence and open reading
PT   frames are used to detect, treat and prevent Neisserial infections.
XX
PS   Claim 7; Appendix A; 692pp; English.
XX
CC   The present invention describes the full length genome of Neisseria
CC   meningitidis B (NMB). The sequences in AAF21544 and AAF21607 to AAF21613
CC   represent fragments of the NMB genomic sequence, as the sequence was too
CC   long to go in a record on its own it was split into 8 sequences which
CC   overlap each other at the beginning and end of each sequence by 49980 bp
CC   (i.e. the last 49980 bp of AAF21544 is repeated at the beginning of
```

CC AAF21607, the last 49980 bp of AAF21607 are repeated at the beginning of
CC AAF21608, and so on). AAF21545 to AAF21588 encode the Neisseria proteins
CC given in AAB58550 to AAB58593, and AAF21589 to AAF21606 represent PCR
CC primers which are used in the exemplification of the present invention.
CC The NMB genome and fragments from it have antibacterial activity, and can
CC be used in vaccines and gene therapy. Neisseria nucleic acids, proteins
CC and/or antibodies which binds to the proteins can be used in compositions
CC for treating or preventing infection due to Neisserial bacteria or as a
CC diagnostic reagent for detecting the presence of Neisserial bacteria or
CC of antibodies raised to Neisserial bacteria. Computers, computer memory,
CC computer storage medium or computer databases can be used in a search to
CC identify open reading frames (ORFs) or coding sequences within the NMB
CC genome. The DNA sequences provide further opportunities to find antigenic
CC or immunogenic proteins which are more effective in vaccines than the
CC outer membrane proteins currently used

XX
CC The invention relates to a novel nucleotide specific to the O-antigen of
CC Shigella dysenteriae, represented in (ADW38769). The process for
CC obtaining the bacterial O-antigen gene cluster is also included. The O-
CC antigen can be used to detect Shigella dysenteriae.

PT   New O-antigen specific nucleotide of Escherichia coli 0138 type for
PT   detecting and identifying the Escherichia coli O138 in a human body and
PT   in an environment.
XX
PS   Claim 1; SEQ ID NO 1; 31pp; Chinese.
XX
CC   This invention describes the novel O-antigen gene cluster isolated from
CC   Escherichia coli O138. The O-antigen gene cluster has been isolated using
CC   the PCR primers AEA81304 and AEA81305. These primers could also be used
CC   to detect and identify the Escherichia coli O138 O-antigen gene cluster
CC   in humans or in the environment. This sequence represents the E. coli
CC   0138 gene cluster described in the invention.

PT Nucleotide specific for Shigella boydii 2 O-antigen useful for detecting
PT and identifying Shigella boydii 2 in human body and environment.
XX
PS Claim 1; SEQ ID NO 1; 33pp; Chinese.
XX
CC The invention relates to a nucleotide specific for Shigella boydii 2 O-
CC antigen, which is the total nucleotide sequence of the gene cluster for
CC controlling the synthesis of O-antigens in Shigella boydii 2, e.g.
CC isolated nucleotide represented by AEA29363, with overall length of 13234
CC bases, or nucleotide of AEA29363 including one or more inserted, deleted
CC or substituted bases and sustaining the functions of the isolated
CC nucleotides. Also described are oligonucleotides of the wzx genes in the
CC O-antigen gene cluster originating from the Shigella boydii 2, and genes
CC and wzy genes having similar functions with wzx, and genes having similar
CC functions with wzy genes or wzy genes. The invention proves the high
CC specificity of oligonucleotides for Shigella boydii 2 O-antigen through
CC PCR. A method for detecting and identifying Shigella boydii 2 in human
CC body and the environment by means of the oligonucleotide according to the
CC invention is also disclosed.

XX
CC   The invention relates to a nucleotide sequence (SEQ ID No:1) which is
CC   specific to the O-antigen of Escherichia coli O100. The nucleotide
CC   sequence represents the complete sequence (11717bp) of a gene cluster for
CC   controlling the synthesis of O-antigen in Escherichia coli O100. The
CC   nucleotide sequence can have one or several inserted, deleted or
CC   substituted bases, whilst still retaining its function. Also described is
CC   a PCR primer for the glycosyltransferase (galF) gene and a PCR primer for
CC   the oligosaccharide unit treatment (gnd) gene, both of which are
CC   contained within the E. coli type O100 O-antigen gene cluster. The
CC   invention also discloses a method for detecting and identifying E. coli
CC   type O100 in humans. This sequence represents the E. coli type O100 O-
CC   antigen gene cluster of the invention.

PS Claim 3; SEQ ID NO 1; 48pp; English.
XX
CC The present invention describes a nucleic acid (I) which encodes a series
CC of enzymes or enzyme fragments, which when expressed together in a cell
CC are able to produce an immunogenic moiety that produces an immune
CC response in animal to which it is administered, where the response is
CC protective against Francisella tularensis infection. Also described: (1)
CC a nucleic acid comprising a fragment of the genomic sequence of F.
CC tularensis of 17623 bp (ADF77651) (II), which may be used to detect the
CC presence of (II) in a sample; (2) an expression vector comprising (I);
CC (3) a host cell transformed with the vector; (4) a method of preparing a
CC prophylactic or therapeutic vaccine comprising transforming a host cell
CC with (I), culturing the host cell and recovering a protective immunogenic
CC moiety from the culture; (5) recombinant O-antigen of F. tularensis
CC obtained by the method of (4); (6) a live vaccine vector comprising (I);
CC (7) a vaccine comprising the live vaccine vector or the recombinant O-
CC antigen, and a pharmaceutical carrier; (8) a method of diagnosing
CC infection by F. tularensis comprising detecting (I) in a sample from a
CC patient suspected of having the infection; (9) a method of
CC differentiating between strains of F. tularensis comprising selecting
CC primers or probes which are specific for (II), and not for similar
CC sequences in subspecies other than F. tularensis subspecies tularensis,
CC or which produce distinguishable products when used to analyse other
CC species, and conducting an analysis using the primers or probes; (10)
CC lipopolysaccharide (LPS) obtained from F. tularensis subspecies
CC tularensis for use as a vaccine against infection by F. tularensis; and
CC (11) a pharmaceutical composition comprising LPS and a pharmaceutical
CC carrier. (I) has antibacterial activity, and can be used in vaccines. The
CC nucleic acids can be used for diagnosing F. tularensis infection, and for
CC the production of the O-antigen of F. tularensis for producing
CC prophylactic or therapeutic vaccines against F. tularensis infection. The
CC present sequence is used in the exemplification of the present invention.

XX
CC The present invention relates to the nucleotide sequence (I; ADW00484)
CC specific to the O-antigen of Escherichia coli 052 (II). (I) is a complete
CC nucleotide sequence of the genome controlling the synthesis of (II),
CC including the separated (I), (I) with one or more inserted, deficient, or
CC substituted bases. Also disclosed is an oligonucleotide of
CC glycocosyntransferase gene and oligosaccharide unit treating gene in O-
CC antigen genome. It has high specificity to said O-antigen. A process for
CC detecting Escherichia coli 052 from human body and environment is also
CC disclosed.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

            - Web : www.genoscope.cns.fr)
COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

JOURNAL Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)
COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial

```
          EcoRI digestion of Drosophila DNA provided by the BDGP from the
          isogenic strain y2; cn bw sp, the same strain used for the BDGP's
          P1 and EST libraries. A more detailed description of the library
          and how to order individual BAC clones, the entire library, or
          filters for hybridization from the BACPAC Resource Center can be
          found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TITLE Direct Submission
JOURNAL Submitted (21-SEP-2004) Balzergue S., UMRGV, INRA/CNRS, 2 rue Gaston Cremieux, 91057 Evry cedex, FRANCE
COMMENT PCR was performed on DNA from transformants of Arabidopsis thaliana plants from INRA (Versailles). The DNA fragment(s) resulting from the PCR were directly sequenced from the left or the right border to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed. Information to order the corresponding mutant line and a link to a database providing a graphical display of the insertion site are available at http://dbsgap.versailles.inra.fr/publiclines/. This sequence has been generated in the framework of the French plant genomics program 'Genoplante' (http://www.genoplante.com and http://genoplante-info.infobiogen.fr).

TITLE Direct Submission
JOURNAL Submitted (01-JUL-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Jun 26, 2005 this sequence version replaced gi:58038070.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
---------- Project Information
Center project name: GDDV
Center clone name: CH230-9H22
---------- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 162619 bases at least Q40
Consensus quality: 164392 bases at least Q30
Consensus quality: 165269 bases at least Q20
Estimated insert size: 169231; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 4 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 109158: contig of 109158 bp in length
* 109159 109258: gap of unknown length
* 109259 110280: contig of 1022 bp in length
* 110281 110380: gap of unknown length
* 110381 111540: contig of 1160 bp in length
* 111541 111640: gap of unknown length
* 111641 170627: contig of 58987 bp in length.

                Web site: http://www-seq.wi.mit.edu
                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L28756
                Center clone name: 430_B_7
            --------------.
            * NOTE: This record contains 68 individual
            * sequencing reads that have not been assembled into
            * contigs. Runs of N are used to separate the reads
            * and the order in which they appear is completely
            * arbitrary. Low-pass sequence sampling is useful for
            * identifying clones that may be gene-rich and allows
            * overlap relationships among clones to be deduced.
            * However, it should not be assumed that this clone
            * will be sequenced to completion. In the event that
            * the record is updated, the accession number will
            * be preserved.
            *        1     1288: contig of 1288 bp in length
            *     1289     1388: gap of 100 bp
            *     1389     2656: contig of 1268 bp in length
            *     2657     2756: gap of 100 bp
            *     2757     4013: contig of 1257 bp in length

            -------------- Project Information
            Center project name: bB440N7
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Sequencing vector: M13; M77815; 100% of reads
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 154439 bases at least Q40
            Consensus quality: 154491 bases at least Q30
            Consensus quality: 154512 bases at least Q20
            Insert size: 154525; sum-of-contigs
            Insert size: 179913; 5.3% error; agarose-fp
            Quality coverage: 8.13x in Q20 bases; sum-of-contigs Quality
            coverage: 7.20x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   102638: contig of 102638 bp in length
            *  102639   102738: gap of 100 bp
            *  102739   154625: contig of 51887 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (12-DEC-2002) Whitehead Institute/MIT Center for Genome
            Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT     All repeats were identified using RepeatMasker:
            Smit, A.F.A. & Green, P. (1996-1997)
            http://ftp.genome.washington.edu/RM/RepeatMasker.html
            -------------- Genome Center
                Center: Whitehead Institute/ MIT Center for Genome Research
                Center code: WIBR
                Web site: http://www-seq.wi.mit.edu
                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L28874
                Center clone name: 907_D_8
            --------------.
            * NOTE: This record contains 55 individual
            * sequencing reads that have not been assembled into
            * contigs. Runs of N are used to separate the reads
            * and the order in which they appear is completely
            * arbitrary. Low-pass sequence sampling is useful for
            * identifying clones that may be gene-rich and allows
            * overlap relationships among clones to be deduced.
            * However, it should not be assumed that this clone
            * will be sequenced to completion. In the event that
            * the record is updated, the accession number will
            * be preserved.

*        1    1116: contig of 1116 bp in length

TITLE Direct Submission
JOURNAL Submitted (01-JUL-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

COMMENT On Jun 26, 2005 this sequence version replaced gi:58038019.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

---------- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
---------- Project Information
Center project name: FAGP
Center clone name: CH240-7O10
---------- Summary Statistics
Assembly program: Atlas 3.0;
Consensus quality: 265527 bases at least Q40
Consensus quality: 268628 bases at least Q30
Consensus quality: 271489 bases at least Q20
Estimated insert size: 269724; sum-of-contigs estimation
Quality coverage: 5x in Q20 bases; sum-of-contigs estimation
---

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
* NOTE: This sequence may represent more than one clone.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 38 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 6; Fig 7; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Escherichia coli O111 O antigen. The gene cluster was
CC   isolated from a cosmid gene bank of E. coli M92 chromosomal DNA by
CC   screening with E. coli O111 antiserum. Open reading frames within the
CC   gene cluster were identified on the basis of homology to known sequences.
CC   The genes encode proteins (see AAW88300-11) involved the synthesis of
CC   sugars present in the polysaccharide antigen, and in the transport or
CC   processing of polysaccharide or oligosaccharide units. The use of nucleic
CC   acid molecules derived from particular assembly and transport genes,
CC   particularly wbd (transferase), wzx (flippase) and wzy (polymerase)
CC   genes, within O antigen gene clusters improves the specificity of methods
CC   for the detection and identification of O antigens, e.g. in testing food-
CC   or faecal-derived samples, or samples from patients. The O antigen is a
CC   major virulence factor of enteropathogenic E. coli strains that cause
CC   diarrhoea and haemorrhagic colitis

PT   Novel nucleic acid molecule useful for the detection of flagellated
PT   bacterial strains in food, feces, etc.
XX
PS   Claim 3; Page 216-221; 245pp; English.
XX
CC   AAZ56331 to AAZ56398 represent nucleic acid molecules (I) encoding all or
CC   part of an Escherichia coli flagellin protein except a protein expressed
CC   by E. coli H1, H7, H12 or H48 type strains. The present invention also
CC   describes a method of detecting the presence of E. coli of a particular H
CC   serotype in a sample, comprising specifically hybridising a nucleic acid,
CC   preferably at least a pair, derived from a flagellating gene, specific
CC   for a particular flagellin gene associated with the H serotype, to any
CC   E.coli in the sample which contain the gene, and detecting any hybridised
CC   molecules, identifying the presence of that serotype in the sample. (I)
CC   are useful for: (1) detecting the presence of E. coli of H serotype in a
CC   sample by hybridising at least one or a pair of (I) to any E. coli in the
CC   sample and detecting the hybridised nucleic acid molecules; and (2) for
CC   detecting the presence of both O and H-serotypes of E. coli by
CC   hybridising at least one or a pair of (I) to any E. coli present in the
CC   sample and detecting the hybridised nucleic acid molecules. (I) is
CC   particularly useful for detecting the combination of O and H antigen.
CC   Hybridised (I) when using at least one (I) is detected by southern blot
CC   analysis and, when using a pair of (I), is detected by polymerase chain
CC   reaction (PCR). AAZ56399 to AAZ56420 represent primers used in the
CC   exemplification of the present invention

PT Detecting and differentiating between hematopoietic cell proliferative
PT disorders, comprises contacting a target nucleic acid with a reagent that
PT distinguishes between methylated and non-methylated CpG dinucleotides.
XX
PS Claim 28; SEQ ID NO 339; 117pp; English.
XX
CC The present invention describes a method for detecting and
CC differentiating between haematopoietic cell proliferative disorders
CC associated with at least 1 gene and/or their regulatory regions in a
CC subject. The method comprises contacting a target nucleic acid in a
CC biological sample obtained from the subject with at least 1 reagent,
CC which distinguishes between methylated and non-methylated CpG
CC dinucleotides within the target nucleic acid. ABZ09861 to ABZ11118
CC represent specifically claimed nucleotide sequences from the present
CC invention. Oligonucleotides from the present invention can be used: for
CC differentiating between healthy haematopoietic cells and proliferative
CC disorder haematopoietic cells; for differentiating between acute
CC lymphocytic leukaemia and acute myelogenous leukaemia; as probes for
CC determining the cytosine methylation state and/or single nucleotide
CC polymorphisms (SNPs) of haematopoietic cell proliferation disorder
CC related sequences and their complements; and as primers for the
CC amplification of haematopoietic cell proliferation disorder related DNA
CC sequences. The nucleotide sequences from the present invention can also
CC be used for detecting a predisposition to, differentiation between
CC subclasses, diagnosis, prognosis, treatment and/or monitoring of
CC haematopoietic cell proliferative disorders. The present method enables a
CC highly specific classification of haematopoietic cell proliferative
CC disorders allowing for improved and informed treatment of patients

PT Fragments of chemically modified genes associated with tumor suppressor
PT genes and oncogenes, useful in designing primers and probes for analyzing
PT diseases associated with cytosine methylation state e.g. cancer.
XX
PS Claim 1; SEQ ID NO 459; 27pp; English.
XX
CC The invention relates to a nucleic acid comprising a sequence of 18
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC bisulphite, of genes associated with tumour suppression and oncogenes
CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (Ss) and sequences
CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analysing
CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences
CC derived from tumour suppressor genes and oncogenes. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT Detecting and differentiating between hematopoietic cell proliferative
PT disorders, comprises contacting a target nucleic acid with a reagent that
PT distinguishes between methylated and non-methylated CpG dinucleotides.
XX
PS Claim 28; SEQ ID NO 193; 117pp; English.
XX
CC The present invention describes a method for detecting and
CC differentiating between haematopoietic cell proliferative disorders
CC associated with at least 1 gene and/or their regulatory regions in a
CC subject. The method comprises contacting a target nucleic acid in a
CC biological sample obtained from the subject with at least 1 reagent,
CC which distinguishes between methylated and non-methylated CpG
CC dinucleotides within the target nucleic acid. ABZ09861 to ABZ11118
CC represent specifically claimed nucleotide sequences from the present
CC invention. Oligonucleotides from the present invention can be used: for
CC differentiating between healthy haematopoietic cells and proliferative
CC disorder haematopoietic cells; for differentiating between acute
CC lymphocytic leukaemia and acute myelogenous leukaemia; as probes for
CC determining the cytosine methylation state and/or single nucleotide
CC polymorphisms (SNPs) of haematopoietic cell proliferation disorder
CC related sequences and their complements; and as primers for the
CC amplification of haematopoietic cell proliferation disorder related DNA
CC sequences. The nucleotide sequences from the present invention can also
CC be used for detecting a predisposition to, differentiation between
CC subclasses, diagnosis, prognosis, treatment and/or monitoring of
CC haematopoietic cell proliferative disorders. The present method enables a
CC highly specific classification of haematopoietic cell proliferative
CC disorders allowing for improved and informed treatment of patients

PT Nucleic acid comprising fragment of chemically modified gene, useful for
PT diagnosis and treatment of diseases associated with abnormal cytosine
PT methylation.
XX
PS Claim 1; SEQ ID NO 1670; 32pp + Sequence Listing; German.
XX
CC The present invention provides a number of human immune system associated
CC genes which are modified by the methylation of cytosines. The sequences
CC can be used in the diagnosis and treatment of immune system disorders,
CC including eye diseases such as retinopathy, neovascular glaucoma and
CC macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid
CC leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,
CC rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
CC diseases. The present sequence is a gene of the invention

PT Detecting a nuclease-mediated cleavage of a target nucleic acid, useful
PT for detecting and monitoring RNase H activity, comprises hybridizing a
PT target nucleic acid to a fluorescently labeled oligonucleotide probe.
XX
PS Example 1; SEQ ID NO 4; 61pp; English.
XX
CC The invention relates to a method of detecting a nuclease-mediated
CC cleavage of a target nucleic acid or measuring a RNaseH activity of an
CC agent by hybridizing a target nucleic acid to a fluorescently labelled
CC oligonucleotide probe complementary to the target nucleic acid and
CC containing a fluorophore at one terminus and a quenching group at the
CC other terminus and contacting the probe-target hybrid with an agent
CC having nuclease activity. When the oligonucleotide probe is unhybridised

CC to the target nucleic acid, the probe adopts a conformation that places
CC the fluorophore and quencher in such proximity that the quencher quenches
CC the fluorescent signal of the fluorophore. Formation of the probe-target
CC hybrid causes sufficient separation of the fluorophore and quencher to
CC reduce quenching of the fluorescent signal of the fluorophore followed by
CC contacting the probe-target hybrid with an agent having nuclease activity
CC to selectively cleave the target nucleic acid and thus release the intact
CC probe. Detection of the release of the probe is by measuring a decrease
CC in the fluorescent signal of the fluorophore as compared to the signal of
CC the probe-target hybrid. The methods are useful for detecting and
CC monitoring RNaseH activity in real time. The methods are also useful for
CC monitoring enzymatic degradation of an RNA-DNA duplex. In an example of
CC the invention, the activity of the RNaseH from E. coli or HIV reverse
CC transcriptase is measure by the method of the invention. in order to test
CC the specificity of the RNaseH cleavage of the target-probe complex, a DNA
CC or RNA contaminant is added to the assay reaction. This sequence
CC corresponds to the single stranded homopolymeric polyA RNA contaminant
CC for testing this activity.

PT   Nanopore analysis system for analyzing polynucleotides includes nanopore
PT   device having structure with aperture, and nanopore data analysis system
PT   that can generate nanopore data points corresponding to each target and
PT   non-target polymer.
XX
PS   Disclosure; SEQ ID NO 1; 17pp; English.
XX
CC   The invention relates to a nanopore analysis system that comprises a
CC   nanopore device and a nanopore data analysis system. The nanopore device
CC   has a structure having an aperture. The nanopore data analysis system can
CC   generate nanopore data points corresponding to each target polymer and
CC   each non-target polymer traversing the aperture; form a distribution
CC   pattern of the data points; and analyse a distribution of target polymer
CC   data points in the distribution pattern. The distribution pattern
CC   includes data cluster(s). The nanopore data analysis system is stored on
CC   a computer-readable medium. A mechanism is provided for analysing the
CC   distribution of target polynucleotide data points in the distribution
CC   pattern. The nanopore data analysis system can also analyse the
CC   distribution of the non-target polynucleotide data points. It can also
CC   determine a ratio between the target polynucleotide data points and the
CC   non-target polynucleotide data points. It can further analyse the
CC   distribution of target polynucleotide data points between the two data
CC   clusters; compare the distribution of the target polynucleotide data
CC   points between the two data clusters to a phosphorylation state standard
CC   distribution; and determine a ratio of phosphorylated target
CC   polynucleotide to non-phosphorylated target polynucleotides. It can also
CC   determine a cluster score for the target polynucleotide data points in a
CC   defined area; and compare the cluster score for the target polynucleotide
CC   data points to a cluster score for a chemical integrity standard density
CC   distribution for the defined area in a distribution of a target
CC   polynucleotide standard. The invention is useful for analysing polymers,
CC   such as polynucleotides. The inventive nanopore analysis system
```

CC potentially provides high speed sampling with single-molecule resolution,
CC which may enable unprecedented dynamic range and sensitivity in analysis
CC of samples containing charged polymers such as polynucleotides or
CC polypeptides. The present sequence is a synthetic construct used in the
CC invention.

PT Fragments of chemically modified genes associated with tumor suppressor
PT genes and oncogenes, useful in designing primers and probes for analyzing
PT diseases associated with cytosine methylation state e.g. cancer.
XX
PS Claim 1; SEQ ID NO 409; 27pp; English.
XX
CC The invention relates to a nucleic acid comprising a sequence of 18
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC bisulphite, of genes associated with tumour suppression and oncogenes
CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (Ss) and sequences
CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analysing
CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences
CC derived from tumour suppressor genes and oncogenes. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT   New apoptosis-resistant virus-sensitive cell.
XX
PS   Example 1; Page 38-41; 51pp; English.
XX
CC   The present invention describes an apoptosis-resistant virus-sensitive
CC   cell line into which an apoptosis resistance gene has been introduced.
CC   The recombinant viruses generated are capable of expressing apoptosis-
CC   associated genes. These can then be used in a variety of diseases for
CC   which the induction of apoptosis by gene transfer, or where the
CC   inhibition of harmful apoptosis, is therapeutic. The recombinant viruses
CC   are useful as vectors for gene therapy which can be applied to cancer
CC   therapy for destroying cancer cells selectively, the treatment of
CC   autoimmune diseases and graft rejection reaction, and apoptosis induction
CC   therapy for inflammatory cells in inflammatory diseases. Prior arts have
CC   encountered the problem where if an adenovirus vector capable of
CC   expressing an apoptosis-associated gene is introduced into animal cells,
CC   the cells producing the virus will be destroyed because the period of
CC   time required to induce cell death by apoptosis is shorter than that
CC   required to replicate and produce the virus, resulting in failure to
CC   obtain a recombinant virus having the integrated apoptosis-associated
CC   gene. In this invention an apoptosis-resistant 293 cell line (having an
CC   apoptosis resistant gene introduced) is established and overcomes the
CC   problem. The present sequence represents the base sequence of the plasmid
CC   pRx-ires-bsr, which contains the cowpox virus bsr gene, and is used in an
CC   example from the present invention

XX
CC   The present invention describes an apoptosis-resistant virus-sensitive
```

CC cell line into which an apoptosis resistance gene has been introduced.
CC The recombinant viruses generated are capable of expressing apoptosis-
CC associated genes. These can then be used in a variety of diseases for
CC which the induction of apoptosis by gene transfer, or where the
CC inhibition of harmful apoptosis, is therapeutic. The recombinant viruses
CC are useful as vectors for gene therapy which can be applied to cancer
CC therapy for destroying cancer cells selectively, the treatment of
CC autoimmune diseases and graft rejection reaction, and apoptosis induction
CC therapy for inflammatory cells in inflammatory diseases. Prior arts have
CC encountered the problem where if an adenovirus vector capable of
CC expressing an apoptosis-associated gene is introduced into animal cells,
CC the cells producing the virus will be destroyed because the period of
CC time required to induce cell death by apoptosis is shorter than that
CC required to replicate and produce the virus, resulting in failure to
CC obtain a recombinant virus having the integrated apoptosis-associated
CC gene. In this invention an apoptosis-resistant 293 cell line (having an
CC apoptosis resistant gene introduced) is established and overcomes the
CC problem. The present sequence represents the base sequence of the plasmid
CC pRx-Bcl-xl-bsr, which contains the human Bcl-xl gene, and is used in an
CC example from the present invention

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

  TITLE     Direct Submission
  JOURNAL   Submitted (21-SEP-2004) Balzergue S., UMRGV, INRA/CNRS, 2 rue
            Gaston Cremieux, 91057 Evry cedex, FRANCE
COMMENT     PCR was performed on DNA from transformants of Arabidopsis thaliana
            plants from INRA (Versailles). The DNA fragment(s) resulting from
            the PCR were directly sequenced from the left or the right border
            to determine the genomic sequence flanking the insertion. T-DNA
            derived sequences were removed. Information to order the
            corresponding mutant line and a link to a database providing a
            graphical display of the insertion site are available at
            http://dbsgap.versailles.inra.fr/publiclines/. This sequence has
            been generated in the framework of the French plant genomics
            program 'Genoplante' (http://www.genoplante.com and
            http://genoplante-info.infobiogen.fr).

TITLE Direct Submission
JOURNAL Submitted (01-JUL-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Jun 26, 2005 this sequence version replaced gi:58038019.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

---------- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
---------- Project Information
Center project name: FAGP
Center clone name: CH240-7O10
---------- Summary Statistics
Assembly program: Atlas 3.0;
Consensus quality: 265527 bases at least Q40
Consensus quality: 268628 bases at least Q30
Consensus quality: 271489 bases at least Q20
Estimated insert size: 269724; sum-of-contigs estimation
Quality coverage: 5x in Q20 bases; sum-of-contigs estimation
----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
* NOTE: This sequence may represent more than one clone.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 38 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

  TITLE     Direct Submission
  JOURNAL   Submitted (12-DEC-2002) Whitehead Institute/MIT Center for Genome
            Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT     All repeats were identified using RepeatMasker:
            Smit, A.F.A. & Green, P. (1996-1997)
            http://ftp.genome.washington.edu/RM/RepeatMasker.html
            -------------- Genome Center
                Center: Whitehead Institute/ MIT Center for Genome Research
                Center code: WIBR
                Web site: http://www-seq.wi.mit.edu
                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L28874
                Center clone name: 907_D_8
            --------------.
            * NOTE: This record contains 55 individual
            * sequencing reads that have not been assembled into
            * contigs. Runs of N are used to separate the reads
            * and the order in which they appear is completely
            * arbitrary. Low-pass sequence sampling is useful for
            * identifying clones that may be gene-rich and allows
            * overlap relationships among clones to be deduced.
            * However, it should not be assumed that this clone
            * will be sequenced to completion. In the event that
            * the record is updated, the accession number will
            * be preserved.
            *        1     1116: contig of 1116 bp in length
            *     1117     1216: gap of 100 bp
            *     1217     2336: contig of 1120 bp in length
            *     2337     2436: gap of 100 bp
            *     2437     3561: contig of 1125 bp in length
            *     3562     3661: gap of 100 bp

  TITLE     Direct Submission
  JOURNAL   Submitted (21-SEP-2004) Balzergue S., UMRGV, INRA/CNRS, 2 rue
            Gaston Cremieux, 91057 Evry cedex, FRANCE
COMMENT     PCR was performed on DNA from transformants of Arabidopsis thaliana
            plants from INRA (Versailles). The DNA fragment(s) resulting from
            the PCR were directly sequenced from the left or the right border
            to determine the genomic sequence flanking the insertion. T-DNA
            derived sequences were removed. Information to order the
            corresponding mutant line and a link to a database providing a
            graphical display of the insertion site are available at
            http://dbsgap.versailles.inra.fr/publiclines/. This sequence has
            been generated in the framework of the French plant genomics
            program 'Genoplante' (http://www.genoplante.com and
            http://genoplante-info.infobiogen.fr).

                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L28756
                Center clone name: 430_B_7
            --------------.
            * NOTE: This record contains 68 individual
            * sequencing reads that have not been assembled into
            * contigs. Runs of N are used to separate the reads
            * and the order in which they appear is completely
            * arbitrary. Low-pass sequence sampling is useful for
            * identifying clones that may be gene-rich and allows
            * overlap relationships among clones to be deduced.
            * However, it should not be assumed that this clone
            * will be sequenced to completion. In the event that
            * the record is updated, the accession number will
            * be preserved.

TITLE Direct Submission
JOURNAL Submitted (09-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Nov 9, 2002 this sequence version replaced gi:23096537.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

    Center clone name: CH230-9H22
-------------- Summary Statistics
    Assembly program: Phrap; version 0.990329
    Consensus quality: 162619 bases at least Q40
    Consensus quality: 164392 bases at least Q30
    Consensus quality: 165269 bases at least Q20
    Estimated insert size: 169231; sum-of-contigs estimation
    Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
--------------
* NOTE: Estimated insert size may differ from sequence length
*   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 4 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*         1   109158: contig of 109158 bp in length
*    109159   109258: gap of unknown length
*    109259   110280: contig of 1022 bp in length
*    110281   110380: gap of unknown length
*    110381   111540: contig of 1160 bp in length
*    111541   111640: gap of unknown length
*    111641   170627: contig of 58987 bp in length.

            Insert size: 179913; 5.3% error; agarose-fp
            Quality coverage: 8.13x in Q20 bases; sum-of-contigs Quality
            coverage: 7.20x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   102638: contig of 102638 bp in length
            *  102639   102738: gap of 100 bp
            *  102739   154625: contig of 51887 bp in length.

TITLE Direct Submission
JOURNAL Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Nov 15, 2002 this sequence version replaced gi:23915286.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

```
-------------- Genome Center
    Center: Baylor College of Medicine
    Center code: BCM
    Web site: http://www.hgsc.bcm.tmc.edu/
    Contact: hgsc-help@bcm.tmc.edu
-------------- Project Information
    Center project name: GUDF
    Center clone name: CH230-372C13
-------------- Summary Statistics
    Assembly program: Phrap; version 0.990329
    Consensus quality: 168057 bases at least Q40
    Consensus quality: 169240 bases at least Q30
    Consensus quality: 170037 bases at least Q20
    Estimated insert size: 172468; sum-of-contigs estimation
    Quality coverage: 8x in Q20 bases; sum-of-contigs estimation
--------------
* NOTE: Estimated insert size may differ from sequence length
*   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 2 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*       1   174007: contig of 174007 bp in length
*  174008   174107: gap of unknown length
*  174108   175544: contig of 1437 bp in length.

XX
PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 6; Fig 7; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Escherichia coli O111 O antigen. The gene cluster was
CC   isolated from a cosmid gene bank of E. coli M92 chromosomal DNA by
CC   screening with E. coli O111 antiserum. Open reading frames within the
CC   gene cluster were identified on the basis of homology to known sequences.
CC   The genes encode proteins (see AAW88300-11) involved the synthesis of
CC   sugars present in the polysaccharide antigen, and in the transport or
CC   processing of polysaccharide or oligosaccharide units. The use of nucleic
CC   acid molecules derived from particular assembly and transport genes,
CC   particularly wbd (transferase), wzx (flippase) and wzy (polymerase)
CC   genes, within O antigen gene clusters improves the specificity of methods
CC   for the detection and identification of O antigens, e.g. in testing food-
CC   or faecal-derived samples, or samples from patients. The O antigen is a
CC   major virulence factor of enteropathogenic E. coli strains that cause
CC   diarrhoea and haemorrhagic colitis

PT Novel nucleic acid molecule useful for the detection of flagellated
PT bacterial strains in food, feces, etc.
XX
PS Claim 3; Page 216-221; 245pp; English.
XX
CC AAZ56331 to AAZ56398 represent nucleic acid molecules (I) encoding all or
CC part of an Escherichia coli flagellin protein except a protein expressed
CC by E. coli H1, H7, H12 or H48 type strains. The present invention also
CC describes a method of detecting the presence of E. coli of a particular H
CC serotype in a sample, comprising specifically hybridising a nucleic acid,
CC preferably at least a pair, derived from a flagellating gene, specific
CC for a particular flagellin gene associated with the H serotype, to any
CC E.coli in the sample which contain the gene, and detecting any hybridised
CC molecules, identifying the presence of that serotype in the sample. (I)
CC are useful for: (1) detecting the presence of E. coli of H serotype in a
CC sample by hybridising at least one or a pair of (I) to any E. coli in the
CC sample and detecting the hybridised nucleic acid molecules; and (2) for
CC detecting the presence of both O and H-serotypes of E. coli by
CC hybridising at least one or a pair of (I) to any E. coli present in the
CC sample and detecting the hybridised nucleic acid molecules. (I) is
CC particularly useful for detecting the combination of O and H antigen.
CC Hybridised (I) when using at least one (I) is detected by southern blot
CC analysis and, when using a pair of (I), is detected by polymerase chain
CC reaction (PCR). AAZ56399 to AAZ56420 represent primers used in the
CC exemplification of the present invention

PT Nanopore analysis system for analyzing polynucleotides includes nanopore
PT device having structure with aperture, and nanopore data analysis system
PT that can generate nanopore data points corresponding to each target and
PT non-target polymer.
XX
PS Disclosure; SEQ ID NO 1; 17pp; English.
XX
CC The invention relates to a nanopore analysis system that comprises a
CC nanopore device and a nanopore data analysis system. The nanopore device
CC has a structure having an aperture. The nanopore data analysis system can
CC generate nanopore data points corresponding to each target polymer and
CC each non-target polymer traversing the aperture; form a distribution
CC pattern of the data points; and analyse a distribution of target polymer
CC data points in the distribution pattern. The distribution pattern
CC includes data cluster(s). The nanopore data analysis system is stored on
CC a computer-readable medium. A mechanism is provided for analysing the
CC distribution of target polynucleotide data points in the distribution
CC pattern. The nanopore data analysis system can also analyse the
CC distribution of the non-target polynucleotide data points. It can also
CC determine a ratio between the target polynucleotide data points and the
CC non-target polynucleotide data points. It can further analyse the
CC distribution of target polynucleotide data points between the two data
CC clusters; compare the distribution of the target polynucleotide data
CC points between the two data clusters to a phosphorylation state standard
CC distribution; and determine a ratio of phosphorylated target
CC polynucleotide to non-phosphorylated target polynucleotides. It can also
CC determine a cluster score for the target polynucleotide data points in a
CC defined area; and compare the cluster score for the target polynucleotide
CC data points to a cluster score for a chemical integrity standard density
CC distribution for the defined area in a distribution of a target
CC polynucleotide standard. The invention is useful for analysing polymers,
CC such as polynucleotides. The inventive nanopore analysis system
CC potentially provides high speed sampling with single-molecule resolution,
CC which may enable unprecedented dynamic range and sensitivity in analysis
CC of samples containing charged polymers such as polynucleotides or
CC polypeptides. The present sequence is a synthetic construct used in the
CC invention.

PT Detecting a nuclease-mediated cleavage of a target nucleic acid, useful
PT for detecting and monitoring RNase H activity, comprises hybridizing a
PT target nucleic acid to a fluorescently labeled oligonucleotide probe.
XX
PS Example 1; SEQ ID NO 4; 61pp; English.
XX
CC The invention relates to a method of detecting a nuclease-mediated
CC cleavage of a target nucleic acid or measuring a RNaseH activity of an
CC agent by hybridizing a target nucleic acid to a fluorescently labelled
CC oligonucleotide probe complementary to the target nucleic acid and
CC containing a fluorophore at one terminus and a quenching group at the
CC other terminus and contacting the probe-target hybrid with an agent
CC having nuclease activity. When the oligonucleotide probe is unhybridised
CC to the target nucleic acid, the probe adopts a conformation that places
CC the fluorophore and quencher in such proximity that the quencher quenches
CC the fluorescent signal of the fluorophore. Formation of the probe-target
CC hybrid causes sufficient separation of the fluorophore and quencher to
CC reduce quenching of the fluorescent signal of the fluorophore followed by
CC contacting the probe-target hybrid with an agent having nuclease activity
CC to selectively cleave the target nucleic acid and thus release the intact
CC probe. Detection of the release of the probe is by measuring a decrease
CC in the fluorescent signal of the fluorophore as compared to the signal of
CC the probe-target hybrid. The methods are useful for detecting and
CC monitoring RNaseH activity in real time. The methods are also useful for
CC monitoring enzymatic degradation of an RNA-DNA duplex. In an example of
CC the invention, the activity of the RNaseH from E. coli or HIV reverse
CC transcriptase is measure by the method of the invention. in order to test
CC the specificity of the RNaseH cleavage of the target-probe complex, a DNA
CC or RNA contaminant is added to the assay reaction. This sequence
CC corresponds to the single stranded homopolymeric polyA RNA contaminant
CC for testing this activity.

PS   Claim 1; SEQ ID NO 409; 27pp; English.
XX
CC   The invention relates to a nucleic acid comprising a sequence of 18
CC   bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC   bisulphite, of genes associated with tumour suppression and oncogenes
CC   having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC   500 are missing from the sequence listing) sequences (Ss) and sequences
CC   complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC   oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC   probes for detecting the cytosine methylation state and/or single
CC   nucleotide polymorphisms and also to be used in an array for analysing
CC   diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC   probes can also be used in a method for ascertaining genetic and/or
CC   epigenetic parameters for the diagnosis and/or therapy of existing
CC   diseases or the predisposition to specific diseases, by analysing
CC   cytosine methylations. The parameters may be compared to another set of
```

CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences
CC derived from tumour suppressor genes and oncogenes. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT New apoptosis-resistant virus-sensitive cell.
XX
PS Example 1; Page 38-41; 51pp; English.
XX
CC The present invention describes an apoptosis-resistant virus-sensitive
CC cell line into which an apoptosis resistance gene has been introduced.
CC The recombinant viruses generated are capable of expressing apoptosis-
CC associated genes. These can then be used in a variety of diseases for
CC which the induction of apoptosis by gene transfer, or where the
CC inhibition of harmful apoptosis, is therapeutic. The recombinant viruses
CC are useful as vectors for gene therapy which can be applied to cancer
CC therapy for destroying cancer cells selectively, the treatment of
CC autoimmune diseases and graft rejection reaction, and apoptosis induction
CC therapy for inflammatory cells in inflammatory diseases. Prior arts have
CC encountered the problem where if an adenovirus vector capable of
CC expressing an apoptosis-associated gene is introduced into animal cells,
CC the cells producing the virus will be destroyed because the period of
CC time required to induce cell death by apoptosis is shorter than that
CC required to replicate and produce the virus, resulting in failure to
CC obtain a recombinant virus having the integrated apoptosis-associated
CC gene. In this invention an apoptosis-resistant 293 cell line (having an
CC apoptosis resistant gene introduced) is established and overcomes the
CC problem. The present sequence represents the base sequence of the plasmid
CC pRx-ires-bsr, which contains the cowpox virus bsr gene, and is used in an
CC example from the present invention

PT New apoptosis-resistant virus-sensitive cell.
XX
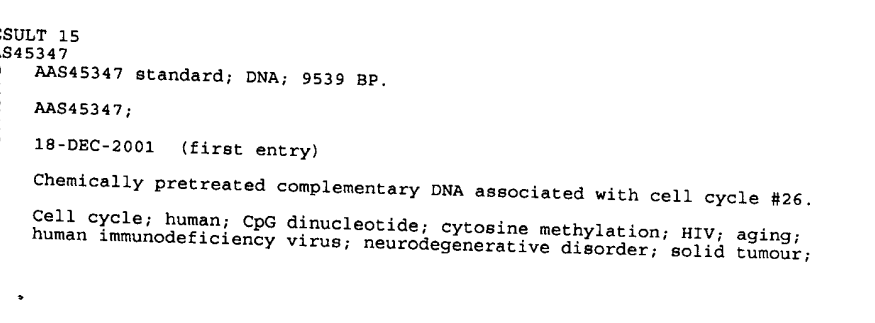
PS Example 3; Page 46-49; 51pp; English.
XX
CC The present invention describes an apoptosis-resistant virus-sensitive
CC cell line into which an apoptosis resistance gene has been introduced.
CC The recombinant viruses generated are capable of expressing apoptosis-
CC associated genes. These can then be used in a variety of diseases for
CC which the induction of apoptosis by gene transfer, or where the
CC inhibition of harmful apoptosis, is therapeutic. The recombinant viruses
CC are useful as vectors for gene therapy which can be applied to cancer
CC therapy for destroying cancer cells selectively, the treatment of
CC autoimmune diseases and graft rejection reaction, and apoptosis induction
CC therapy for inflammatory cells in inflammatory diseases. Prior arts have
CC encountered the problem where if an adenovirus vector capable of
CC expressing an apoptosis-associated gene is introduced into animal cells,
CC the cells producing the virus will be destroyed because the period of
CC time required to induce cell death by apoptosis is shorter than that
CC required to replicate and produce the virus, resulting in failure to
CC obtain a recombinant virus having the integrated apoptosis-associated



CC gene. In this invention an apoptosis-resistant 293 cell line (having an
CC apoptosis resistant gene introduced) is established and overcomes the
CC problem. The present sequence represents the base sequence of the plasmid
CC pRx-Bcl 2-i-hCD 25, which contains the human Bcl-2 gene, and is used in
CC an example from the present invention

XX
PS Claim 1; SEQ ID NO 52; 28pp; English.
XX
CC Sequences AAS45296-AAS45520 represent chemically pretreated genomic DNA
CC molecules associated with the cell cycle and specific PCR primers of the
CC invention. The sequences are useful for detecting the methylation state
CC of all CpG dinucleotides in a sequence and therefore for analysing
CC associated diseases. By analysing cytosine methylations in the pretreated
CC DNA, genetic and/or epigenetic parameters for the diagnosis and therapy
CC of existing diseases or the predisposition to specific diseases can be
CC ascertained. The parameters may be compared to another set of genetic
CC and/or epigenetic parameters, the differences serving as basis for
CC diagnosis and/or prognosis events which are disadvantageous to patients.
CC The sequences of the invention are useful for the diagnosis and therapy
CC of HIV infection, neurodegenerative disorders, graft-versus-host disease,
CC aging, glomerular disease, Lewy body disease, arthritis,
CC arteriosclerosis, solid tumours and cancers

```
COMMENT     PCR was performed on DNA from transformants of Arabidopsis thaliana
            plants from INRA (Versailles). The DNA fragment(s) resulting from
            the PCR were directly sequenced from the left or the right border
            to determine the genomic sequence flanking the insertion. T-DNA
            derived sequences were removed. Information to order the
            corresponding mutant line and a link to a database providing a
            graphical display of the insertion site are available at
            http://dbsgap.versailles.inra.fr/publiclines/. This sequence has
            been generated in the framework of the French plant genomics
            program 'Genoplante' (http://www.genoplante.com and
            http://genoplante-info.infobiogen.fr).

/clone_lib="SHGC-CLJ"
/note="Vector: Express 1; Total and poly A+ RNA was isolated from the indicated stickleback tissue, and a cDNA library was constructed in the Express 1 plasmid vector by Open Biosystems. First strand cDNA synthesis was primed with an 54 bp linker primer containing an oligodT sequence preceeded by a synthetic NotI site (first strand primer: 5'-GACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3'). Following second strand synthesis, cDNAs were made blunt at the end corresponding to the original 5 prime end of mRNA, and cloned directionally into the NotI and EcoRV sites of Express 1. Note that the EcoRV site is typically destroyed in the blunt end cloning, leaving a junction of the form 'xxxATC' (where is ATC is the second half of the EcoRV site, and xxx is derived from the cDNA sequence). A map of the Express 1 vector is available at: http://www.openbiosystems.com/cdna_library_construction_faq.php#8 The primary library was transformed and amplified in DH10B (T1 phage resistant) bacteria. Clones available from Open Biosystems: http://www.openbiosystems.com/stickleback"

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ACCESSION AF078736 U13629
VERSION AF078736.1 GI:5678713
KEYWORDS .
SOURCE Escherichia coli
ORGANISM Escherichia coli
Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales; Enterobacteriaceae; Escherichia.
REFERENCE 1 (bases 1 to 14516)
AUTHORS Bastin,D.A. and Reeves,P.R.
TITLE Sequence and analysis of the O antigen gene (rfb) cluster of Escherichia coli O111
JOURNAL Gene 164 (1), 17-23 (1995)
PUBMED 7590310
REFERENCE 2 (bases 3021 to 9981)
AUTHORS Reeves,P.R., Hobbs,M., Valvano,M.A., Skurnik,M., Whitfield,C., Coplin,D., Kido,N., Klena,J., Maskell,D., Raetz,C.R. and Rick,P.D.
TITLE Bacterial polysaccharide synthesis and gene nomenclature
JOURNAL Trends Microbiol. 4 (12), 495-503 (1996)
PUBMED 9004408
REFERENCE 3 (bases 1 to 14516)
AUTHORS Wang,L., Curd,H., Qu,W. and Reeves,P.R.
TITLE Sequencing of Escherichia coli O111 O-antigen gene cluster and identification of O111-specific genes
JOURNAL J. Clin. Microbiol. 36 (11), 3182-3187 (1998)
PUBMED 9774562
REFERENCE 4 (bases 3021 to 9981)
AUTHORS Bastin,D.A.
TITLE Direct Submission
JOURNAL Submitted (11-MAR-1997) Microbiology, University of Sydney, Maze Crescent, Sydney, NSW 2006, Australia
REFERENCE 5 (bases 1 to 14516)
AUTHORS Wang,L., Curd,H., Qu,W., Bastin,D.A. and Reeves,P.R.
TITLE Direct Submission
JOURNAL Submitted (15-JUL-1998) Microbiology, University of Sydney, Maze Crescent, Sydney, NSW 2006, Australia
COMMENT On Aug 3, 1999 this sequence version replaced gi:1155016.

Murphy,L., Quail,M.A., Samual,G., Skovsted,I.C., Barrell,B.G.,
Reeves,P., Parkhill,J. and Spratt,B.G.
TITLE Genetic analysis of the capsular biosynthetic locus from all 90
serotypes of Streptococcus pneumoniae
JOURNAL Unpublished
REFERENCE 2 (bases 1 to 19113)
AUTHORS Bentley,S.D.
TITLE Direct Submission
JOURNAL Submitted (09-DEC-2004) Submitted on behalf of the Pathogen
Sequencing Unit, Sanger Institute, Wellcome Trust Genome Campus,
Hinxton, Cambridge CB10 1SA, E-mail: sdb@sanger.ac.uk
COMMENT NOTE: This sequence was generated from a PCR product representing
the region from dexB to aliA and is not necessarily responsible for
the expressed capsule serotype. For a detailed description of how
CDS products were predicted see the associated publication.

XX
PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 6; Fig 7; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Escherichia coli O111 O antigen. The gene cluster was
CC   isolated from a cosmid gene bank of E. coli M92 chromosomal DNA by
CC   screening with E. coli O111 antiserum. Open reading frames within the
CC   gene cluster were identified on the basis of homology to known sequences.
CC   The genes encode proteins (see AAW88300-11) involved the synthesis of
CC   sugars present in the polysaccharide antigen, and in the transport or
CC   processing of polysaccharide or oligosaccharide units. The use of nucleic
CC   acid molecules derived from particular assembly and transport genes,
CC   particularly wbd (transferase), wzx (flippase) and wzy (polymerase)
CC   genes, within O antigen gene clusters improves the specificity of methods
CC   for the detection and identification of O antigens, e.g. in testing food-
CC   or faecal-derived samples, or samples from patients. The O antigen is a
CC   major virulence factor of enteropathogenic E. coli strains that cause
CC   diarrhoea and haemorrhagic colitis

PT   Novel nucleic acid molecule useful for the detection of flagellated
PT   bacterial strains in food, feces, etc.
XX
PS   Claim 3; Page 216-221; 245pp; English.
XX
CC   AAZ56331 to AAZ56398 represent nucleic acid molecules (I) encoding all or
CC   part of an Escherichia coli flagellin protein except a protein expressed
CC   by E. coli H1, H7, H12 or H48 type strains. The present invention also
CC   describes a method of detecting the presence of E. coli of a particular H
CC   serotype in a sample, comprising specifically hybridising a nucleic acid,
CC   preferably at least a pair, derived from a flagellating gene, specific
CC   for a particular flagellin gene associated with the H serotype, to any
CC   E.coli in the sample which contain the gene, and detecting any hybridised
CC   molecules, identifying the presence of that serotype in the sample. (I)
CC   are useful for: (1) detecting the presence of E. coli of H serotype in a
CC   sample by hybridising at least one or a pair of (I) to any E. coli in the
CC   sample and detecting the hybridised nucleic acid molecules; and (2) for
CC   detecting the presence of both O and H-serotypes of E. coli by
CC   hybridising at least one or a pair of (I) to any E. coli present in the
CC   sample and detecting the hybridised nucleic acid molecules. (I) is
CC   particularly useful for detecting the combination of O and H antigen.
CC   Hybridised (I) when using at least one (I) is detected by southern blot
CC   analysis and, when using a pair of (I), is detected by polymerase chain
CC   reaction (PCR). AAZ56399 to AAZ56420 represent primers used in the
CC   exemplification of the present invention

PT A library of DNA fragments of Escherichia coli strains for the phylogenic
PT determination of a given strain comprises polynucleotides of nature B2/D+
PT A-.
XX
PS Example 6; Fig 6; 646pp; English.
XX
CC The invention relates to a library of DNA fragments of Escherichia coli
CC strains comprising polynucleotides (ABA88577-ABA88729 and ABA89533) and
CC encoded proteins (ABB52459-ABB52919 and ABB52954-ABB53094) of nature
CC B2/D+A-. The polynucleotides have potential antiinflammatory,
CC antibacterial and immunosuppressive activity as part of pharmaceutical
CC compositions used to treat, palliate or prevent extra-intestinal E. coli
CC infections. The polypeptides are useful for determining the phylogenic
CC group of a given E. coli strain. These polypeptides can detect and treat
CC an undesired development of E. coli, particularly an extra-intestinal
CC infection that include systemic and non-diarrhoeal infections such as
CC septicaemia, pyelonephritis and meningitis this is particularly
CC advantageous as bacterial resistance is increasing with the more frequent
CC use of broad spectrum antibiotics

XX
PT   Peptide encoded by an operon including genes from Escherichia coli for
PT   screening potential drugs, detecting virulence and treating conditions
PT   associated with infection by a Gram negative bacterium.
XX
PS   Example 9; Page 56-64; 122pp; English.
XX
CC   The present sequence encodes Escherichia coli virulence proteins. The
CC   specification describes virulence proteins which are encoded by an operon
CC   including tatA, tatB, tatC, tatE, mdoG, creC, recG, yggN, eck1, iroD,
CC   iroC, iroE, mtd2 or ms1-16 genes obtained from Escherichia coli K1. The
CC   virulence proteins and polynucleotides, and their vaccines are useful for
CC   screening potential drugs, for the detection of virulence, and for
CC   treating or preventing conditions associated with infection by a Gram
CC   negative bacterium particularly Escherichia coli

PT A library of DNA fragments of Escherichia coli strains for the phylogenic
PT determination of a given strain comprises polynucleotides of nature B2/D+
PT A-.
XX
PS Example 6; Fig 6; 646pp; English.
XX
CC The invention relates to a library of DNA fragments of Escherichia coli
CC strains comprising polynucleotides (ABA88577-ABA88729 and ABA89533) and
CC encoded proteins (ABB52459-ABB52919 and ABB52954-ABB53094) of nature
CC B2/D+A-. The polynucleotides have potential antiinflammatory,
CC antibacterial and immunosuppressive activity as part of pharmaceutical
CC compositions used to treat, palliate or prevent extra-intestinal E. coli
CC infections. The polypeptides are useful for determining the phylogenic
CC group of a given E. coli strain. These polypeptides can detect and treat
CC an undesired development of E. coli, particularly an extra-intestinal
CC infection that include systemic and non-diarrhoeal infections such as
CC septicaemia, pyelonephritis and meningitis this is particularly
CC advantageous as bacterial resistance is increasing with the more frequent
CC use of broad spectrum antibiotics

PT   O-antigen specific nucleotide of E. coli 0142 type.
XX
PS   Claim 1; SEQ ID NO 1; 30pp; Chinese.
XX
CC   The invention relates to the O-antigen biosynthetic gene cluster of
CC   Escherichia coli O142 (AEB64840) and to variants thereof. The O-antigen
CC   of E. coli O142 is a lipopolysaccharide antigen. The invention also
CC   relates to PCR primers (AEB64841-AEB64842) for the amplification of the O
CC   -antigen gene cluster, oligonucleotides derived from the
CC   glycosyltransferase and oligose unit processing genes of the O-antigen
CC   gene cluster, and a method for detecting E. coli O142 in the environment
CC   and in the human body using oligonucleotides of the invention. The
CC   present sequence represents the specifically claimed sequence of the E.
CC   coli O142 O-antigen biosynthetic gene cluster.

PT for diagnosing a bacterial disease, as components of antibacterial
PT vaccines, as targets for antibacterial drugs, or as biocontrol agents for
PT plants.
XX
PS Example; SEQ ID NO 1480; 328pp; English.
XX
CC The invention relates to isolated Acinetobacter baumannii nucleic acids.
CC The A. baumannii nucleic acids and polypeptides are useful as reagents
CC for diagnosing a bacterial disease, as components of antibacterial
CC vaccines, as targets for antibacterial drugs, to detect the presence of
CC A. baumannii and other Acinetobacter species in a sample, in screening
CC compounds for the ability to interfere with the A. baumannii life cycle
CC or to inhibit A. baumannii infection, and as biocontrol agents for
CC plants. The present sequence represents DNA encoding an A. baumannii
CC protein.

PT Nucleotide specific to O-antigen of shigella dysenteriae I and Bacillus
PT coli 0121.
XX
PS Claim 1; SEQ ID NO 1; 39pp; Chinese.
XX
CC The invention relates to a novel nucleotide specific to the O-antigen of
CC Shigella dysenteriae, represented in (ADW38769). The process for
CC obtaining the bacterial O-antigen gene cluster is also included. The O-
CC antigen can be used to detect Shigella dysenteriae.

PT isolate candidate molecules for rational drug discovery programs.
XX
PS Claim 14; SEQ ID NO 10729; 1766pp; English.
XX
CC The invention relates to an isolated nucleic acid comprising any one of

CC the 6213 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide;(5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than S. aureus, S. typhimurium,
CC K. pneumoniae or P. aeruginosa. The present sequence is one of the target
CC prokaryotic essential genes. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT   Nucleotide specific to O-antigen of shigella boydii 7.
XX
PS   Claim 1; SEQ ID NO 1; 41pp; Chinese.
XX
CC   The invention relates to the O-antigen biosynthetic gene cluster of
CC   Shigella boydii serotype 7 (ADN02599). The O-antigen of Shigella boydii
CC   is a lipopolysaccharide antigen. The invention also relates to PCR
CC   primers for the amplification of the 6-phosphogluconate dehydrogenase
CC   (gnd) or glycosyltransferase genes (ADN02591-ADN02596), a process for
CC   obtaining the O-antigen gene cluster, and a method for detecting Shigella
CC   boydii serotype 7 in the environment and in the human body. The present
CC   sequence represents the specifically claimed partial sequence of the
CC   Shigella boydii serotype 7 O-antigen biosynthetic gene cluster. Note: The
CC   features table gives CDS locations for 13 open reading frames (ORFs)
CC   which have mostly been obtained from the locations indicated in the
CC   sequence given on pages 33-42 of the specification, with the exception of
CC   the CDS start position for wzy (orf9) - see note attached to this
CC   feature. Also, the start and/or stop positions the inventors have
CC   indicated for flmA (orf1) and flmB (orf2) in this sequence may be
CC   incorrect - again see note attached to these features.

PS Claim 6; SEQ ID NO 537; 56pp; English.
XX
CC The invention relates to a protein comprising or having at least 50%
CC identity to any of the 2469 amino acid sequences, identified in the
CC specification (available on a computer readable format), or its fragment,
CC expressed from 2469 of 2489 identified DNA coding regions from the
CC Streptococcus pneumoniae type 4 strain genomic sequence appearing as
CC ABS56454. Also included are an antibody which binds one of the proteins,
CC treating a patient by administering the protein, DNA or antibody (in a
CC composition), a kit comprising first and second primers, which are the
CC nucleic acid cited above or fragments between nucleotides 8-100 of a
CC sequence not defined in the specification, for amplifying a target
CC sequence contained within a Streptococcus nucleic acid sequence, where
CC the first primer is substantially complementary to the target sequence
CC and the second primer is substantially complementary to the complement of
CC the target sequence, and where the parts of the primers having
CC substantial complementarity define the termini of the target sequence to
CC be amplified, assay comprising contacting a test compound with the
CC protein, and determining whether the test compound binds to the protein
CC and a Streptococcus pneumoniae bacterium, where one or more genes
CC encoding the proteins has been rendered inactive. The proteins, nucleic
CC acid molecules, antibody and compositions are useful as medicaments for
CC treating or preventing a disease or infection due to streptococcus
CC bacteria, particularly S. pneumoniae, such as pneumonia, sepsis, otitis
CC media or ear infection. They are also useful in developing vaccines,
CC diagnostics and antibiotics. The methods are useful for identifying
CC immunodominant proteins. The present sequence is one of the 2489
CC identified coding region from the genomic sequence. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences. (Updated on 27-OCT-2003 to
CC standardise OS field)

PT New Streptococcus pneumoniae polynucleotides, useful for treating or
PT preventing S. pneumoniae infections, or non-systemic diseases, e.g.
PT otitis media, which are induced or exacerbated by S. pneumoniae.
XX
PS Claim 1; Page 193; 1091pp; English.
XX
CC The invention relates to isolated polynucleotides (ABZ72147-ABZ42522) of
CC a Streptococcus pneumoniae genomic sequence, a fragment or degenerate
CC variant of the polynucleotide or a nucleic acid sequence 95% identical to
CC one of the polynucleotides. The S. pneumoniae polynucleotides and encoded
CC polypeptides (ABP81299-ABP81674) are useful for treating or preventing S.
CC pneumoniae infections or non-systemic diseases, e.g. otitis media, which
CC are induced or exacerbated by S. pneumoniae. These are also useful for
CC detecting S. pneumoniae in a biological sample or diagnosing S.
CC pneumoniae infection in a subject. The polynucleotides have antibacterial
CC activity and are useful in gene therapy

PT Nucleotide peculiar to O-antigen of Shigella boydii 18 useful for
PT controlling synthesis of O-antigen and detecting and identifying Shigella
PT in human body.
XX
PS Claim 1; SEQ ID NO 1; 33pp; Chinese.
XX
CC The invention provides a nucleotide which is specific to O-antigen of
CC Shigella boydii 18. It is the sequence of the gene cluster for
CC controlling the synthesis of the O-antigen. The sequence also includes
CC the oligonucleotide of the glycosyltransferase gene and oligosaccharide
CC unit treatment gene. The invention utilizes PCR to verify that the
CC oligonucleotide has high specificity to the O-antigen of Shigella boydii
CC 18, and also discloses the method for detecting and identifying Shigella
CC boydii 18 in the human body. The current sequence represents the S.
CC boydii O-antigen gene.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

  TITLE     Direct Submission
  JOURNAL   Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage :
            BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
            - Web : www.genoscope.cns.fr)
COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-09-692-570-1
; Sequence 1, Application US/09692570
; Patent No. 6797466
; GENERAL INFORMATION:
;  APPLICANT: Bult et al.
;  TITLE OF INVENTION: Complete Genome Sequence of the Methanogenic Archaeon, Methanococ
; Patent No. 6797466
;  TITLE OF INVENTION:  jannaschii
;  FILE REFERENCE: PB275C1
;  CURRENT APPLICATION NUMBER: US/09/692,570
;  CURRENT FILING DATE:  2003-01-14
;  PRIOR APPLICATION NUMBER: US 60/024,428
;  PRIOR FILING DATE: 1996-08-22
;  PRIOR APPLICATION NUMBER: US 08/916,421
;  PRIOR FILING DATE: 1997-08-22
;  NUMBER OF SEQ ID NOS: 20
;  SOFTWARE: PatentIn version 3.1
; SEQ ID NO 1
;   LENGTH: 1664976
;   TYPE: DNA
;   ORGANISM: Methanococcus jannaschii
;   FEATURE:
;   NAME/KEY: misc_feature
;   LOCATION: (28222)..(28222)
;   OTHER INFORMATION: n equals a, t, c, or g
;   FEATURE:
;   NAME/KEY: misc_feature
;   LOCATION: (28257)..(28258)
;   OTHER INFORMATION: n equals a, t, c, or g
;   FEATURE:
;   NAME/KEY: misc_feature
;   LOCATION: (84773)..(84773)
;   OTHER INFORMATION: n equals a, t, c, or g
;   FEATURE:
;   NAME/KEY: misc_feature
;   LOCATION: (84808)..(84808)
;   OTHER INFORMATION: n equals a, t, c, or g
;   FEATURE:
;   NAME/KEY: misc_feature
;   LOCATION: (84812)..(84812)
;   OTHER INFORMATION: n equals a, t, c, or g
;   FEATURE:
;   NAME/KEY: misc_feature
;   LOCATION: (98120)..(98120)
;   OTHER INFORMATION: n equals a, t, c, or g
;   FEATURE:
;   NAME/KEY: misc_feature
;   LOCATION: (98159)..(98159)
;   OTHER INFORMATION: n equals a, t, c, or g
;   FEATURE:
;   NAME/KEY: misc_feature
;   LOCATION: (98239)..(98239)
;   OTHER INFORMATION: n equals a, t, c, or g
;   FEATURE:
;   NAME/KEY: misc_feature
;   LOCATION: (98266)..(98266)
;   OTHER INFORMATION: n equals a, t, c, or g
;   FEATURE:
;   NAME/KEY: misc_feature
;   LOCATION: (98343)..(98343)
;   OTHER INFORMATION: n equals a, t, c, or g
;   FEATURE:
;   NAME/KEY: misc_feature
;   LOCATION: (103998)..(103998)
;   OTHER INFORMATION: n equals a, t, c, or g
;   FEATURE:
;   NAME/KEY: misc_feature
;   LOCATION: (148948)..(148948)
;   OTHER INFORMATION: n equals a, t, c, or g
;   FEATURE:
;   NAME/KEY: misc_feature
;   LOCATION: (163385)..(163385)
;   OTHER INFORMATION: n equals a, t, c, or g
;   FEATURE:
;   NAME/KEY: misc_feature
;   LOCATION: (191989)..(191989)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ACCESSION   AY730592
VERSION     AY730592.2  GI:55228555
KEYWORDS    .
SOURCE      Citrobacter freundii
  ORGANISM  Citrobacter freundii
            Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales;
```

```
            Enterobacteriaceae; Citrobacter.
REFERENCE   1  (bases 1 to 14224)
  AUTHORS   Samuel,G., Hogbin,J.P., Wang,L. and Reeves,P.R.
  TITLE     Relationships of the Escherichia coli O157, O111, and O55 O-Antigen
            Gene Clusters with Those of Salmonella enterica and Citrobacter
            freundii, Which Express Identical O Antigens
  JOURNAL   J. Bacteriol. 186 (19), 6536-6543 (2004)
   PUBMED   15375135
REFERENCE   2  (bases 1 to 14224)
  AUTHORS   Reeves,P.R., Samuel,G., Hogbin,J.-P. and Wang,L.
  TITLE     Direct Submission
  JOURNAL   Submitted (23-AUG-2004) School of Molecular and Microbial
            Biosciences, University of Sydney, Sydney, NSW 2006, Australia
REFERENCE   3  (bases 1 to 14224)
  AUTHORS   Reeves,P.R., Samuel,G., Hogbin,J.-P. and Wang,L.
  TITLE     Direct Submission
  JOURNAL   Submitted (02-NOV-2004) School of Molecular and Microbial
            Biosciences, University of Sydney, Sydney, NSW 2006, Australia
  REMARK    Sequence update by submitter
COMMENT     On Nov 2, 2004 this sequence version replaced gi:54401406.

PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 6; Fig 8; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Escherichia coli O157 O antigen. The gene cluster was
CC   obtained by PCR amplification of E. coli O157:H7 strain (C664-1992) DNA
CC   using primers (see AAX06752-63) based on O antigen gene sequences. 12
CC   Open reading frames within the gene cluster were identified on the basis
CC   of homology to known sequences. The genes encode proteins (see AAW88312-
CC   23) involved the synthesis of sugars present in the polysaccharide
CC   antigen, and in the transport or processing of polysaccharide or
CC   oligosaccharide units. The use of nucleic acid molecules derived from
CC   particular assembly and transport genes, particularly wbd (transferase),
CC   wzx (flippase) and wzy (polymerase) genes, within O antigen gene clusters
CC   improves the specificity of methods for the detection and identification
CC   of O antigens, e.g. in tests of food- or faecal- derived samples, or
CC   samples from patients. The O antigen is a major virulence factor of
CC   enteropathogenic E. coli strains that cause diarrhoea and haemorrhagic
CC   colitis

PT Novel nucleic acid molecule useful for the detection of flagellated
PT bacterial strains in food, feces, etc.
XX
PS Claim 3; Page 229-233; 245pp; English.
XX
CC AAZ56331 to AAZ56398 represent nucleic acid molecules (I) encoding all or
CC part of an Escherichia coli flagellin protein except a protein expressed
CC by E. coli H1, H7, H12 or H48 type strains. The present invention also
CC describes a method of detecting the presence of E. coli of a particular H
CC serotype in a sample, comprising specifically hybridising a nucleic acid,
CC preferably at least a pair, derived from a flagellating gene, specific
CC for a particular flagellin gene associated with the H serotype, to any
CC E.coli in the sample which contain the gene, and detecting any hybridised
CC molecules, identifying the presence of that serotype in the sample. (I)
CC are useful for: (1) detecting the presence of E. coli of H serotype in a
CC sample by hybridising at least one or a pair of (I) to any E. coli in the
CC sample and detecting the hybridised nucleic acid molecules; and (2) for
CC detecting the presence of both O and H-serotypes of E. coli by
CC hybridising at least one or a pair of (I) to any E. coli present in the
CC sample and detecting the hybridised nucleic acid molecules. (I) is
CC particularly useful for detecting the combination of O and H antigen.
CC Hybridised (I) when using at least one (I) is detected by southern blot
CC analysis and, when using a pair of (I), is detected by polymerase chain
CC reaction (PCR). AAZ56399 to AAZ56420 represent primers used in the
CC exemplification of the present invention

XX
CC The invention relates to a novel enterohaemorragic Escherichia coli
CC O157:H7-specific nucleic acid molecule. A polynucleotide of the invention
CC has anti-bacterial activity. The polypeptide can be used in detection
CC and/or treatment of O157:H7 infection. The nucleotide sequence of the
CC genome of Enterohaemorragic E coli O157:H7 was determined. The present
CC sequence represents an E. coli 0157:H7-specific nucleic acid of the
CC invention.

PT   New DNA sequences from Escherichia coli strain O157:H7, useful for
PT   detecting E. coli O157:H7 in a sample, or in designing diagnostic probes
PT   which can be used to distinguish strain O157:H7 from strain K12 using
PT   molecular techniques.
XX
PS   Claim 16; SEQ ID NO 121; 33pp; English.
XX
CC   The invention relates to an isolated DNA molecule comprising an E. coli
CC   strain 0157:H7 sequence selected from a clostridial cytotoxin-like gene,
CC   a urease gene cluster, a RTX toxin-like gene cluster, a locus of
CC   enterocyte effacement and 2 genes from its associated lymphocytic phage
CC   933W (a putative serine/threonine kinase and a tail fibre gene). E. coli
CC   0157:H7 can cause food poisoning, specifically acute haemorrhagic colitis
CC   (which can develop into haemolytic uraemic syndrome). Also included are
CC   an isolated DNA molecule comprising a nucleotide sequence identical to at
CC   least 25 contiguous nucleotides contained in DNA sequences selected from
CC   ACD18988-ACD19242 (being 255 E.coli 0157 DNA sequences which are not
CC   found in E.coli K12), a recombinant DNA construction comprising the DNA
CC   above and a method for detecting E. coli 0157:H7 (ATCC 43895) in a sample
CC   (or distinguishing between 0157 and K12) using a probe derived from one
CC   of the 255 sequences. The DNA sequences are useful in detecting E. coli
CC   O157:H7 in a sample, for the early diagnosis of humans and livestock
CC   infected with O157:H7, and in designing diagnostic probes which can be
CC   used to distinguish strain O157:H7 from strain K12 using molecular
CC   techniques. The present sequence is one of the 255 E. coli 0157:H7 DNA
CC   sequence (termed OZID_1-OZID255). Note: The sequence data for this patent
CC   did not form part of the printed specification, but was obtained in
CC   electronic format directly from the USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030023075 (Updated on 27-OCT-2003
CC   to standardise OS field)

PT   New nucleotide specific to the O-antigen of O24 type Escherichia coli,
PT   for detecting and identifying Escherichia coli type O24 in a human body.
XX
PS   Claim 1; SEQ ID NO 1; 35pp; Chinese.
XX
CC   The invention relates to a nucleotide sequence (SEQ ID No:1) which is
CC   specific to the O-antigen of Escherichia coli O24. The nucleotide
CC   sequence represents the complete sequence (18772bp) of a gene cluster for
CC   controlling the synthesis of O-antigen in Escherichia coli O24. The
CC   nucleotide sequence can have one or several inserted, deleted or
CC   substituted bases, whilst still retaining its function. Also described is
CC   a PCR primer for the glycosyltransferase (galF) gene and a PCR primer for
CC   the oligosaccharide unit treatment (gnd) gene, both of which are
CC   contained within the E. coli type O24 O-antigen gene cluster. The
CC   invention also discloses a method for detecting and identifying E. coli
CC   type O24 in humans. This sequence represents the E. coli type O24 O-
CC   antigen gene cluster of the invention.

XX
CC The invention relates to an isolated nucleic acid comprising any one of
CC the 6213 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide;(5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than S. aureus, S. typhimurium,
CC K. pneumoniae or P. aeruginosa. The present sequence is one of the target
CC prokaryotic essential genes. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PS   Claim 14; SEQ ID NO 16844; 1766pp; English.
XX
CC   The invention relates to an isolated nucleic acid comprising any one of
CC   the 6213 antisense sequences given in the specification where expression
CC   of the nucleic acid inhibits proliferation of a cell. Also included are:
CC   (1) a vector comprising a promoter operably linked to the nucleic acid
CC   encoding a polypeptide whose expression is inhibited by the antisense
CC   nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC   polypeptide or its fragment whose expression is inhibited by the
CC   antisense nucleic acid; (4) an antibody capable of specifically binding
CC   the polypeptide;(5) producing the polypeptide; (6) inhibiting cellular
CC   proliferation or the activity of a gene in an operon required for
CC   proliferation; (7) identifying a compound that influences the activity of
CC   the gene product or that has an activity against a biological pathway
CC   required for proliferation, or that inhibits cellular proliferation; (8)
CC   identifying a gene required for cellular proliferation or the biological
CC   pathway in which a proliferation-required gene or its gene product lies
CC   or a gene on which the test compound that inhibits proliferation of an
CC   organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC   compound's activity; (11) a culture comprising strains in which the gene
CC   product is overexpressed or underexpressed; (12) determining the extent
CC   to which each of the strains is present in a culture or collection of
CC   strains; or (13) identifying the target of a compound that inhibits the
CC   proliferation of an organism. The antisense nucleic acids are useful for
CC   identifying proteins or screening for homologous nucleic acids required
CC   for cellular proliferation to isolate candidate molecules for rational
CC   drug discovery programs, or for screening homologous nucleic acids
CC   required for proliferation in cells other than S. aureus, S. typhimurium,
CC   K. pneumoniae or P. aeruginosa. The present sequence is one of the target
CC   prokaryotic essential genes. Note: The sequence data for this patent did
CC   not form part of the printed specification, but was obtained in
CC   electronic format directly from WIPO at

PS   Claim 1; SEQ ID NO 1; 29pp; Chinese.
XX
CC   The invention relates to the O-antigen biosynthetic gene cluster of
CC   Escherichia coli O81 (AEA88828) and to variants thereof. The O-antigen of
CC   E. coli O81 is a lipopolysaccharide antigen. The invention also relates
CC   to PCR primers (AEA88829-AEA88830) for the amplification of the gnd gene
CC   of the O-antigen gene cluster, oligonucleotides derived from the
CC   glycosyltransferase and oligose unit processing genes of the O-antigen
CC   gene cluster, and a method for detecting E. coli O81 in the environment
CC   and in the human body using oligonucleotides of the invention. The
CC   present sequence represents the specifically claimed sequence of the E.
CC   coli O81 O-antigen biosynthetic gene cluster.

PT New isolated Enterococcus faecalis polynucleotides and polypeptides -
PT used to develop products for the detection of Enterococcus and for use in
PT vaccines for prevention or attenuation of Enterococcus infection.
XX
PS Claim 1; Page 759-761; 2084pp; English.
XX
CC A computer readable medium has been developed which has recorded on it
CC 982 nucleotide sequences isolated from the Enterococcus faecalis genome.
CC AAX12938 to AAX13919 represent these nucleotide sequences which are
CC primary nucleotide sequences, also known as contigs. The computer-based
CC system can identify fragments of the Enterococcus faecalis genome with
CC commercial importance. The products can be used to detect the presence of
CC Enterococcus faecalis in samples. They can also be used for diagnosing
CC Enterococcal infection in an animal and monitoring progression of
CC disease, and for identifying agents which can be used to modulate the
CC growth or pathogenicity of Enterococcus faecalis, or another related
CC organism, in vivo or in vitro. In particular the polypeptides encoded by
CC the Enterococcus faecalis nucleotide sequences can be used in vaccines to
CC prevent or attenuate an Enterococcal infection

PT Computer readable medium having recorded on it a Enterococcus faecalis
PT nucleotide sequence useful for detecting diseases related to Enterococcus
PT infections in animals.
XX
PS Claim 1; Page; 119pp; English.
XX
CC The present invention relates to a new computer readable medium with an
CC Enterococcus faecalis nucleotide sequence. The invention is useful to
CC diagnose the presence of E.faecalis in a sample or determining the
CC presence of a specific microbe in a sample. The invention is also useful
CC for modulating the growth or pathogenicity of E.faecalis, in a vaccine to
CC confer resistance to Enterococcal infection, for commercial, therapeutic
CC and industrial purposes, and for fermenting a particular sugar source or
CC to produce a particular metabolite. The invention is useful for detecting
CC diseases related to Enterococcus infections in animals, and for detecting
CC E.faecalis using biochip technology. The present nucleic acid sequence

CC represents an Enterococcus faecalis contig DNA sequence of the invention.
CC Note: The sequence data for this patent did not form part of the printed
CC specification but was obtained in electronic format directly from USPTO
CC at http.sequdata.uspto.gov

PT Nucleotide with O-antigen idiocrasy against Ball's and shiga's-8 and
PT colibacillus 0143.
XX
PS Claim 1; SEQ ID NO 1; 35pp; Chinese.
XX
CC This invention relates to a novel nucleic acid molecule specific to the O
CC -antigen of Shigella boydii 8 and colibacillus 0143. Specifically, this
CC DNA sequence comprises 15124 bases. The present invention describes this
CC sequence as one that contains a glycosyltransferase gene and further
CC provides oligonucleotides such that it can be amplified. Accordingly, the
CC primers provided herein can be used to detect Shigella boydii 8 and
CC colibacillus 0143 in the human body and also where it is present in the
CC environment. This polynucleotide sequence is the Shigella boydii 8 DNA
CC that is specific to the 0-antigen, given in an exemplification of the
CC invention.

PT New antisense nucleic acids, useful for identifying proteins or screening
PT for homologous nucleic acids required for cellular proliferation to
PT isolate candidate molecules for rational drug discovery programs.
XX
PS Claim 14; SEQ ID NO 22150; 1766pp; English.
XX
CC The invention relates to an isolated nucleic acid comprising any one of
CC the 6213 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide;(5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than S. aureus, S. typhimurium,
CC K. pneumoniae or P. aeruginosa. The present sequence is one of the target
CC prokaryotic essential genes. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT   Nucleotide specific to O-antigen of shigella dysenteriae 8.
XX
PS   Claim 1; SEQ ID NO 1; 29pp; Chinese.
XX
CC   The invention relates to the O-antigen biosynthetic gene cluster of
CC   Shigella dysenteriae serotype 8 (ADN02611). The O-antigen of Shigella
CC   dysenteriae is a lipopolysaccharide antigen. The invention also relates
CC   to PCR primers for the amplification of the 6-phosphogluconate
CC   dehydrogenase (gnd) gene (ADN02612-ADN02613) or glycosyltransferase gene,
CC   a process for obtaining the O-antigen gene cluster, and a method for
CC   detecting Shigella dysenteriae serotype 8 in the environment and in the
CC   human body. The present sequence represents the specifically claimed
CC   partial sequence of the Shigella dysenteriae serotype 8 O-antigen
CC   biosynthetic gene cluster. Note: The features table gives CDS locations
CC   for 7 open reading frames (ORFs) which have mostly been obtained from the
CC   locations indicated in the sequence given on pages 26-29 of the
CC   specification, with the exception of the CDS stop position for wzx (orf4)
CC   - see note attached to this feature.

JOURNAL Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)
COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-10-158-865-1
; Sequence 1, Application US/10158865
; Patent No. 6846651
; GENERAL INFORMATION:
;  APPLICANT: Fleischmann et al.
;  TITLE OF INVENTION: Nucleotide Sequence of the Haemophilus Influenzae Rd Genome, Fragm
; Patent No. 6846651
;  TITLE OF INVENTION:  Thereof, and Uses Thereof
;  FILE REFERENCE: PB186P2C1D1
;  CURRENT APPLICATION NUMBER: US/10/158,865
;  CURRENT FILING DATE:  2002-06-03
;  PRIOR APPLICATION NUMBER: US 09/557,884
;  PRIOR FILING DATE: 2000-04-25

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
